6. Interference Complaints:

1. **147.270 WA6ZTR** Mt. Disappointment – interference with 147.885 N6JMI at Rasnow Peak. The complaint is from a user of the Rasnow Peak repeater, KN6OK Dale Edwards. Matt reviewed the technical aspects of the problem that the Mt. Disappointment repeater transmitter has too wide a deviation and splatter, measured deviation is 4.3KHz. The audio band pass favors the high end with asymmetrical clipping and double pre emphasis. This has been monitored by Matt W6KGB. The receiver in the Rasnow repeater may be too wide and should be checked. It appears the receiver is not centered on frequency and the band pass is too wide. Motion to request that the audio shaping and deviation limiting characteristics for the transmitter in the 147.270 WA6ZTR Mt. Disappointment repeater be changed to reduce splatter. This is the second time this issue is being addressed. Letter to be sent by Matt. Motion by Lou KG6FCT, Second by John KK6NJ, Vote 3-0-0. Bob NO6B is to check on the original RFC in the 1990 file for the WA6ZTR Mt. Disappointment Repeater. Also check on the antenna used.

Motion to transfer ownership from Glen Mc Jennett KE6ZLZ to Jeffrey A Stouffer K6JSI and because of a building location change, repositioning of the antenna, the repeater being off the air at this time, and change in projected usage the repeater is placed into a 9 month test to end April 30, 2006.
